Press Release

Accelero S2

Passive heatpipe cooling solution for main stream graphics

Pfäffikon / Switzerland, 23.2.2007. The Swiss cooling solution provider – ARCTIC COOLING introduces a radically new passive cooling solution for main stream graphic cards. Without any moving parts inside, Accelero S2 effectively removes heat from the graphics card keeping the components cool. Thanks to the elegant design, Accelero S2 outperforms some active cooling solutions, bringing a true industrial leading zero noise solution for demanding users.

Radically new optimized passive design

To provide the ultimate heat conductivity and larger surface area, Accelero S2 features dual thick copper heatpipes which extend directly from the GPU core. Heat from the GPU is rapidly dissipated through 31 fins that extend beyond the height of the graphic card. Optimized fin design allows better air flow thus removing the heat more effectively. Together with the bundled RAM heat sinks, Accelero S2 provides an all-round passive solution that achieves the best cooling performance.

Practical zero noise solution

Install and forget about it – No moving parts mean it is maintenance free. An extra pair of mounting clips provides extensive protection to the graphic card that prevents damage from improper handling. With the help of the new mounting design, Accelero S2 is widely compatible with ATI (Radeon X1650, X1600, X1550, X1300, X1050, X850, X800, X700, X600, X550, X300 and 9XXX series) and nVIDIA (GeForce 7600, 7300, 6600, FX 5950, FX 5900, FX 5700 (Ultra), FX 5600, FX 5500, FX 5200, 4 TI and MX series) graphic cards.

Accelero S2 will be available by end of March 2007. The MSRP is USD 22 and Euro 18 (excl VAT).
